

FABA™ Klassik 150kg

The FABA™ Klassik is developed and manufactured by Tractel®.

FABA™ Klassik is a fall arrest slider. It is compatible with the ladder and rail of only FABA™ A11 (in galvanized steel or stainless steel).

The fall arrest slider is an integral part of the climbing protection system and together with the climbing protection rails it forms a package of fall arrest systems that safeguard against falling.

In the event of a fall, the locking mechanism on the fall arrest slider locks into one of the notches in the rail profile and this prevents the fall arrest slider from moving downwards and this action saves the user from falling.

FABA™ Klassik is certified according to the latest standard: EN 353-1:2018.

To enhance Tractel® 150kg range, FABA™ Klassik is certified for an operator weighing min. 50kg up to max. 150kg (this figure includes the weight of a person and his/her equipment).

FABA™ Klassik is CE compliant according to the latest PPE Regulation EU 2016/425.

The FABA™ Klassik must be inspected by Tractel® or an authorised specialist at least once every 12 months.

The slider FABA™ Klassik has a useful life of 10 years as of the date of manufacture. On expiry of the 10-year period following manufacture date, authorization of use of the slider is subject to successful inspection by a Tractel® trained and certified technician.

Absorber

The absorber is developed and manufactured by Tractel®. It is made in strong and resistance synthetic bands. Its design ensures a maximum force of 600daN (~600kg) transmitted to the operator in the event of a fall as required by the norm.

In the event of a fall, if the traveller is deemed usable after inspection, the absorber can be replaced by a Tractel® trained and certified technician.

Traveller

The traveller is made in casted stainless steel to improve the durability of the slider. The FABA™ Klassik slider and the A11 systems are symmetrically designed. The traveller is designed so that it will always work properly indifferently of the direction it is inserted into the A11 profile.

Connector

The FABA™ Klassik is equipped with a manual screw connector M10.
